3 **ABSTRACT OF THE DISCLOSURE**

4

5 An apparatus and method for preventing the spillage of a drilling fluid onto a drilling rig  
6 floor. The apparatus comprises a first and second sleeve, and wherein the first and second sleeve  
7 form a cylindrical container. The apparatus also includes a closing member operatively attached  
8 at a first end of the first sleeve and operatively attached at a second end of the second sleeve,  
9 wherein the closing member is pneumatically operated. Also included is a latching member that  
10 latches the first sleeve with the second sleeve, and a seal member positioned along a face on the  
11 first sleeve that cooperates with a sealing surface positioned along a face on the second sleeve. In  
12 one embodiment, the latching member is a pneumatically operated piston contained within a  
13 cylinder, and wherein the cylinder is attached to a first hook and the piston is attached to a second  
14 hook, wherein the first latch and second latch cooperate with a fastener to latch the first sleeve  
15 and the second sleeve together.
